Adobe Dreamweaver CS3

Level 2

ENT1606

1 Day

Workshop Goal

This course is designed for students who use Adobe DreamWeaver to design and develop web pages in a WYSIWYG environment, and also have the ability to understand and work with the architecture and coding of web pages.

Topic Outline

Working in Code view using the coding features of DreamWeaver

Formatting content using style sheets

Creating an effective user-navigation interface

Working with AP elements to enhance the layout and positioning of elements on a web page

Automate tasks

Create forms

Author a web page using XML-based data

Recommended Prior Learning

Before taking this course, students should have completed the Adobe Dreamweaver CS3: Level 1 course or possess equivalent knowledge.
